

The perfect interim cleaning method for heavy traffic areas

Between regular extraction or shampoo cleaning, the **Dri-Way™** system is the best way to keep carpet looking clean and fresh. Carpeting subjected to heavy traffic can be kept looking good year round without using methods requiring extensive drying time. In fact, traffic can be maintained in the area being cleaned without interfering with the cleaning of **Dri-Way™** Compound.

The **Dri-Way Jr.** machine is used to gently work the **Dri-Way™** Compound into the carpet to help loosen the soil. The twin, counter rotating brushes are gentle enough for all carpets. The process is so easy to learn that professional cleaners can become competent **Dri-Way™** technicians in only a few minutes. Two **Dri-Way Jr.**'s can be joined together to improve efficiency with the Double Head Adapter.

DIRECTIONS FOR USE

Test fabric in inconspicuous place for color fastness before using.

1. Sprinkle generously on a 5 ft. x 5 ft. area.
2. For heavily soiled areas, pre-spray with Certified Traffic Spotter before using **Dri-Way™** Compound.
3. Brush in immediately with a Certified **Dri-Way Jr.** machine or long handle floor brush using a back and forth and crosswise motion working the granules well into the carpet nap.
4. Allow first area to dry while proceeding with another 5 ft. x 5 ft. area. Continue in this manner until first area is dry to the touch. This will permit maximum soil absorption.
5. Vacuum entire carpet with brush type upright vacuum or **Certified Model S Pile Brush**. Begin vacuuming where you first applied **Dri-Way™** Compound and continue vacuuming in the same pattern as compound was applied. Small residual amounts of compound left in carpet will not harm fibers and will provide soil retarding action.
